OBJECTIVE

- Detail-oriented Data Analyst skilled in **SQL**, **Power BI**, and **Python**, with abilities in data cleaning, analysis, and visualization. Proficient in transforming raw data into actionable insights to support business decision-making

PROJECTS

PROJECT NAME:-GLOBAL LIFE INSURENCE

TOOL: POWER BI

- Developed an interactive Power BI Reports for Global Life Insurance to analyze policies, premiums, claims, and agent performance.
- Transformed raw data from SQL Server and Excel using Power Query and designed a star schema with fact and dimension tables.
- Created DAX measures to track key metrics like Claim Settlement Ratio, Customer Retention Rate, premium trends, and agent performance.
- Built dynamic dashboards with slicers for region, policy type, claim status, and agent; implemented row-level security and scheduled refresh on Power BI Service.
- Improved management visibility, strengthened decision-making, and reduced manual reporting efforts by 70%.

PROJECT NAME: WEB MARKETING ANALYSIS

TOOL: POWER BI

- Developed a SQL-based Insurance Claims Analysis project to extract actionable insights from customer, policy, and claim data.
- Designed and implemented database tables and relationships using SQL, including Customers, Policies, and Claims tables with primary and foreign keys.
- Wrote complex SQL queries with JOIN, GROUP BY, CASE, and aggregate functions to calculate key metrics such as total claims, pending claims, and claim settlement ratio.
- Analyzed data trends to identify high-risk policies and settlement performance, supporting data-driven decision-making.
- Demonstrated ability to integrate SQL analysis with reporting tools (like Power BI) for interactive dashboards and visualization of business insights.
